

CLAIMS

What is claimed is:

1. A golf practice putting device comprising:
 - 5 a first member having an opening approximately the size of a regulation golf hole;
 - a second member having a surface area larger than the opening on the first member, the second member having adhesive properties on a top surface, the first member affixed to the adhesive top surface of the second member with the opening exposing the adhesive properties of the second
 - 10 member, such that a golf ball putted towards the device can adhere to the adhesive top surface of the second member.
2. The device of Claim 1, wherein the first member is comprised of a material selected from the group consisting of plastic, cardboard, metal, and paper.
3. The device of Claim 1, wherein the adhesive properties of the second member
- 15 are similar to tacky-type tape, such as duct tape.
4. The device of Claim 1, wherein the thickness of the device is in a range of approximately 0.015 inches to 0.035 inches.
5. The device of Claim 1, wherein the golf ball putted towards the device adheres to the adhesive top surface when the golf ball is putted with a correct speed.
- 20 6. The device of Claim 1, wherein the first member and the second member have a substantially flat surface area.

7. The device of Claim 1, wherein the second member includes a front end, a rear end, a bottom surface, and a top surface, the front end and the rear end create an angle with respect to the bottom surface and the top surface.
8. The device of Claim 1, further comprising a third member, the third member includes a front end, a rear end, a bottom surface and a top surface, the front end and the rear end creates an angle with respect to the bottom surface and the top surface.
9. A golf practice putting device comprising:
 - a first member having a diameter approximately the size of a regulation golf hole;
 - an adhesive top surface affixed to the first member;wherein a golf ball putted towards the device with the proper speed can roll onto and adhere to the adhesive top surface.
10. The device of Claim 9, further comprising a removable non-adhesive covering removably affixed to the adhesive top surface.
11. The device of Claim 9, wherein the member is comprised of a material selected from the group consisting of plastic, cardboard, metal, and paper.
12. The device of Claim 9, wherein the adhesive properties of the adhesive top surface are similar to tacky-type tape, such as duct tape.
13. The device of Claim 9, wherein the thickness of the device is in a range of approximately 0.015 inches to 0.035 inches.

14. The device of Claim 9, wherein the golf ball putted towards the device only adheres to the adhesive top surface if the golf ball is putted with a correct speed.
15. The device of Claim 9, further comprising a second member having a substantially similar diameter to the first member to cover the first member.
- 5 16. A golf practice putting device comprising:
a housing having an open position and a closed position, the housing having an interior located surface approximately the size of a regulation golf hole and having adhesive properties;
wherein when the housing is in the open position and placed on a flat surface,
10 such that the interior surface of the housing is exposed, a golf ball putted towards the device can adhere to the adhesive surface of the housing.
17. The device of Claim 16, wherein the interior surface is recessed.
18. The device of Claim 16, wherein the housing comprises a first member and a second member.
- 15 19. The device of Claim 18, wherein the first member and second member are attached by a hinge.
20. The device of Claim 18, wherein with the housing in the closed position, the first member and the second member are joined to form an enclosure.
- 20 21. The device of Claim 16, wherein the housing is comprised of a material selected from the group consisting of plastic, cardboard, metal, and paper.

22. The device of Claim 16, wherein the members of the housing have a thickness in a range of approximately 0.015 inches to 0.035 inches.
23. The device of Claim 16, wherein the adhesive properties of the surface are similar to tacky-type tape, such as duct tape.
- 5 24. The device of Claim 16, wherein the golf ball putted towards the device adheres to the adhesive surface when the golf ball is putted with a correct speed.
25. A golf practice putting device comprising:
a housing having an open position and a closed position, and having a diameter approximately the size of a regulation golf hole, the housing including
10 a first of circular member and a second circular member, each circular member having an exterior side and an interior side, one of the circular members having an adhesive surface on its interior side;
wherein when the housing is in the open position and placed on a flat surface, such that the interior adhesive surface is exposed, a golf ball putted towards the
15 device can adhere to the adhesive surface.
26. The device of Claim 25, wherein the first circular member and the second circular member are attached by a hinge.
27. The device of Claim 25, wherein with the housing in the closed position, the first circular member and the second circular member are joined to form an
20 enclosure.
28. The device of Claim 25, wherein the housing is comprised of a material selected from the group consisting of plastic, cardboard, metal, and paper.

-14-

29. The device of Claim 25, wherein the members of the housing have a thickness in a range of approximately 0.015 inches to 0.035 inches.
30. The device of Claim 25, wherein the adhesive properties of the surface are similar to tacky-type tape, such as duct tape..
- 5 31. The device of Claim 25, wherein the golf ball putted towards the device adheres to the adhesive surface when the golf ball is putted with a correct speed.
